

# Pattern Recognition: Create a Pattern

## (Answers)

Name:

Class:

Here is a pattern of numbers:

**1, 2, 4, 8, 16, 32**

Here are the instructions to create that number pattern

```
Number = 1
Output Number
Repeat until Number > 35
    Number = Number * 2
    Output Number
```

You are going to see more number patterns. Write the instructions to create the pattern. There may be more than one possible way to create the pattern.

**Pattern 1:**

**10, 8, 6, 4, 2, 0**

**(Other answers are possible as long as the instructions match the pattern and the meaning is clear. In this example each number is 2 less from the previous number.)**

```
Number = 10
Output Number
Repeat until Number = 0
    Number = Number - 2
    Output Number
```

**Pattern 2:**

12, 17, 23, 30, 38

(Other answers are possible as long as the instructions match the pattern and the meaning is clear. In this example there are two numbers. Number1 starts at 12 and Number2 starts at 5. In each repetition Number 2 goes up by 1 and Number 1 and Number 2 are added together to show the output.)

Number1 = 12

Number2 = 5

Output Number1

Repeat until Number1 > 40

Number1 = Number1 + Number2

Number2 = Number2 + 1

Output Number1

**Pattern 3:**

10, 12, 15, 17, 20, 22

(Other answers are possible as long as the instructions match the pattern and the meaning is clear. In each repetition the number is increased by 2 and the output displayed and then increased further by 3 and the output displayed.)

Number = 12

Output Number

Repeat until Number > 22

Number = Number + 2

Output Number

Number = Number + 3

Output Number
