

Algorithms: Flow Diagrams (Answers)

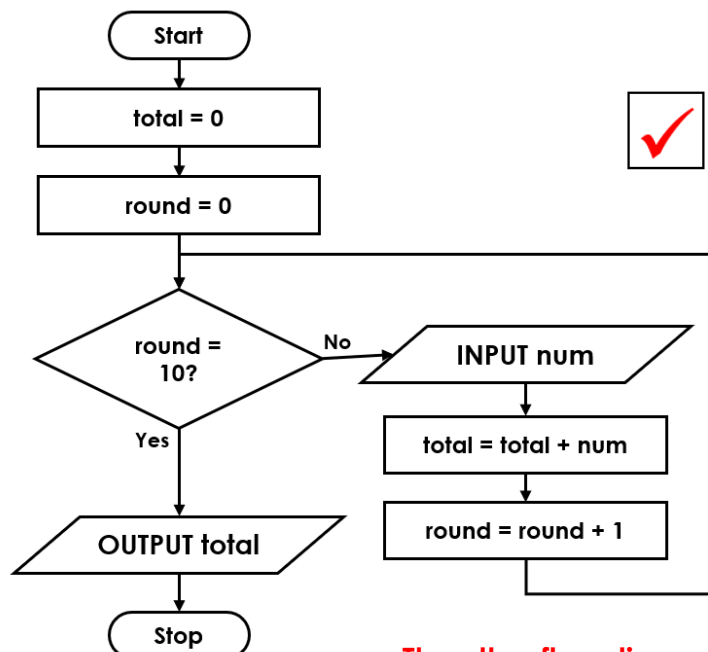

Name:

Class:

Task 1: Here are two flow diagrams. Tick which one is correct to ask a user to enter 10 numbers, add them together and show the total.

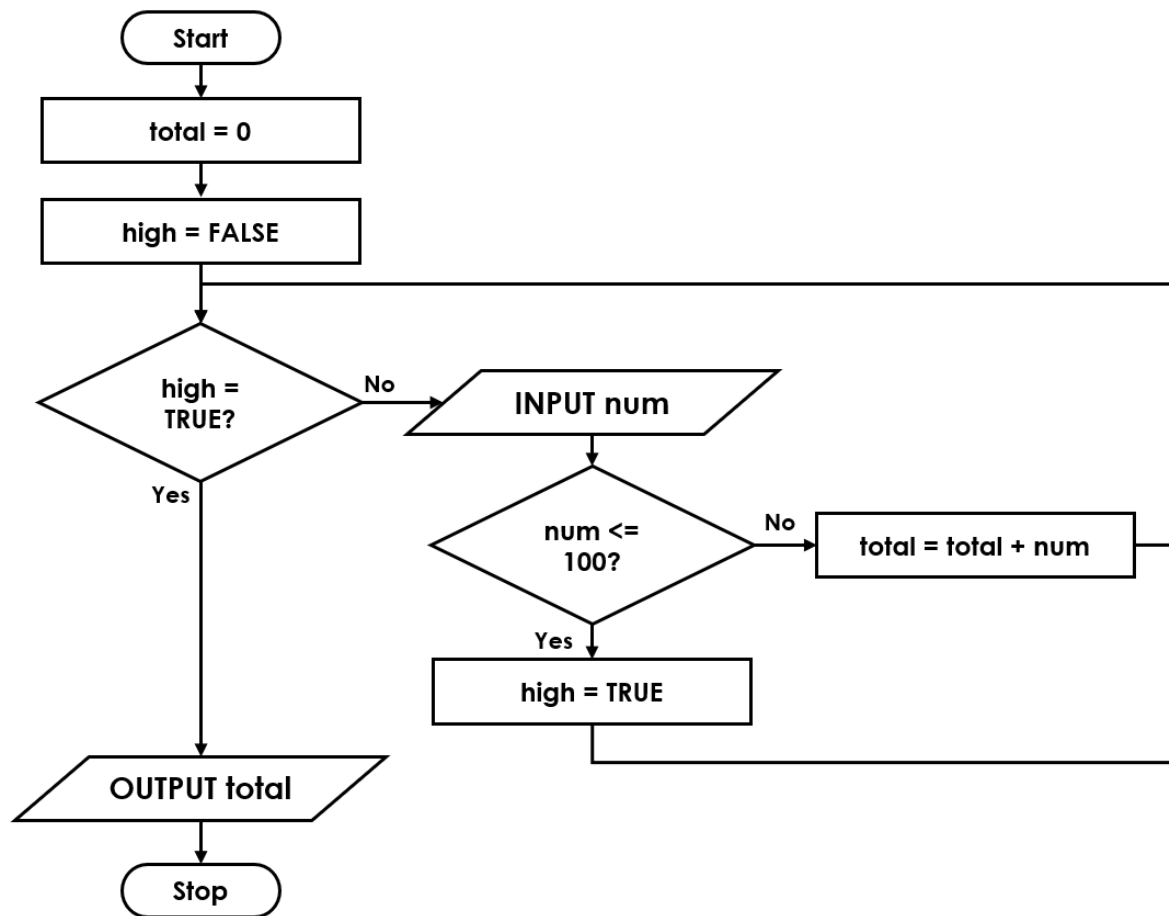

☐ I think this flow diagram is correct

☒ I think this flow diagram is correct

The other flow diagram will keep setting the round value to 0 each time the loop runs. So will be in a never-ending loop (known as an infinite loop)

Task 2: Use the space below to describe what you think this flow diagram will do.

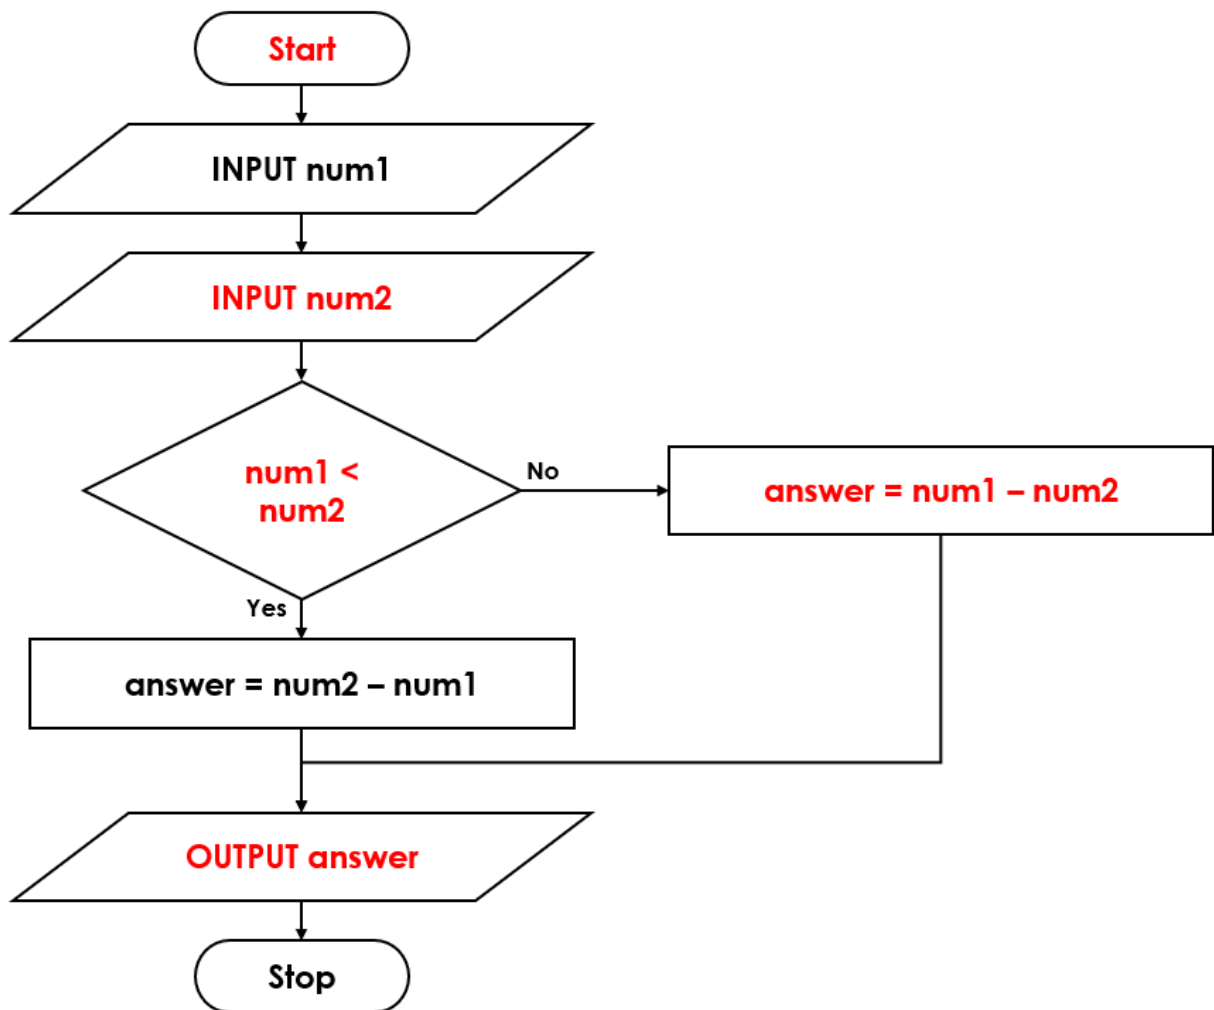

It will ask the user to keep inputting numbers.

If the number the user inputs is 100 or less it will add it to the total and repeats the loop again.

When the user inputs a number which is over 100 then the loop should stop and it should display the final total (not including the number which was over 100).

Task 3: Fill in the gaps for the following flow diagram. The flow diagram should ask the user to enter two numbers. Subtract the smallest number from the larger one and display the answer.

Task 4: What do each of these symbols represent in a flow diagram?

Symbol	What does it represent?
	Terminator (start or stop)
	Input or output
	Process (doing something)
	Decision diamond (allows the program to take alternative routes depending on the answer)
